Magicvest is a SaaS platform that analyzes new cryptocurrencies on Dextool and Dexcreener.., and sends signals for those with high scores (these cryptos are likely not scams). The analysis evaluates a promising crypto based on its tokenization, associated wallets (for example, if no single person holds multiple wallets in that crypto or if no one holds a large percentage of the total supply), the number of holders, the hype on social networks (like Twitter), and liquidity. All these factors together give the crypto a score.

Magicvest also provides signals for older memecoins, analyzing whether they have good scores for buying the dip, especially if these cryptos show signs of a potential surge in value.

1- header

1. total ai magic signal sent is (the number of signals sent by the app since creation this number includes new crypto signals and buy the dip signals)
2. watchlist is (the number of tokens added to the watchlist in total for all users)
3. total token scanned is (the total number of crypto scanners by the application automatically and by users)
4. Risk tokens detected is (the number of crypto in risk token detected by the application)
5. supported Chains (the number of blockchains that the application supports)

2- Top barre

1. Top new tokens (the button redirects to a page showing the best signals sent during the week)
2. Newly listed on cmc (This button redirects to a page that displays the new crypto coinmarketpcap list)
3. Presale (This button redirects to a page that displays the presale detected by ai on pinksale)
4. search barre (users will be able to search for a token directly with the name or with the contract address)
5. Setting (it allows you to make settings on the entire platform, for example if you just want the platform to show you the signals from the Solana block chain)
6. Notification (notification appears here for example when support responds to a ticket)
7. profile (when you click you are redirected to the profile page to modify your information or change your name...)

3- Ai Magic Signal

1. here we display the new crypto that has just been created and posted on dextool and dexscreener these crypto are analyzed by the platform automatically and if they have a good score and are probably safe (the AI sends them as a signal)
2. More (This button takes you directly to the AI Magic Signal page)

4- Post section

1. In this section it displays posts that the admin publishes, for example a youtube video, a banner with a clickable link...

Magicboard

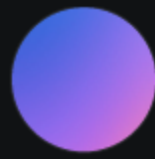

1. Ai trending - here the platform displays the tokens (which make more performance, more searches, more visits, more talk on social networks)in real time
2. Daily gainers - the platform displays the best performing tokens during 24 hours ago
3. Daily losers - the platform displays the most losing tokens during 24 hours ago in real time
4. Daily ricks tokens - the platform displays the risk tokens detected during 24 hours ago
5. Risk tokens detected - the platform displays the number of risker tokens detected since the creation of the app in real time
6. Token Scanned - the platform displays the number of tokens scanned since the app was created in real time
7. AI signal send - the platform displays the number of signals sent since creation in real time
8. Sentiment . the platform displays the sentiment of memecoins on the market

6- Ai buy the dip

1. The platform displays the cryptos that have been launched for a while, for example a week, 2 weeks, 1 month... and it is consolidated crypto and with the analysis if it is detected that it is a crypto or a change to explode it sends as a signal. They are analyzed thanks to The analysis evaluates a promising crypto based on its tokenization, associated wallets (for example, if no single person holds multiple wallets in that crypto or if no one holds a large percentage of the total supply), the number of holders, the hype on social networks (like Twitter), and liquidity. All these factors together give the crypto a score.
2. More (This button takes you directly to the Ai buy the dip page)

7- This section allows you to control section 8

1. Ai magic signals (This button allows you to display new token signals.)
2. Buy the dip (This button allows you to display new signals - Ai buy the dip)
3. Safes crypto - This button allows you to display crypto investments for example (solana, avax, bitcoin, flux...) cryptos that have already proven themselves on the market and are likely to explode soon
4. Daily Gainers This button allows you to display the best performance of signals sent by the platform on the day
5. Presales - This button displays the presale detected by ai on pinksale
6. Risk token Detect - This button allows you to display the risky tokens detected by the platform today
7. Best week ai signal - This button allows you to display the best performing signals of the weekend

8- This section is controlled by section 7

1. the name of the crypto followed by its blockchain extension ex blue/sol
2. the price of the asset
3. how much it increased or decreased during the day
4. the pnl realized from the signal sent by the platform
5. the risk score result analyzed by the platform
6. the long vs short ratio of the asset
7. since when the asset was created
8. the volume of the asset
9. the number of holders of the asset
10. asset liquidity
11. the market cap of the asset
12. when you click here it directs you to the dex where you can swap or buy the asset
13. when we click on this button it takes us to the asset analysis page

14. when you click on this button it adds the asset to the watchlist page
15. This drop-down feature allows you to choose specifically which crypto blockchain you would like to receive signals from.

Wishlist page

- In this page, we display the tokens added to our watchlist. When a crypto makes a big performance we receive a notification and when it also makes a big loss too.

1-

1. In this section we display the 10 most performing cryptos from the list of the day. It is classified by performance
2. When you click on this button a link is generated and the user can share his wishlist with another user. But, the other user must have a subscription to be able to see his list

2- In this section all crypto added to your wishlist are displayed

1. This drop-down feature allows the user to choose the number of hours to display to see the performance of the tokens in their list during that chosen hour.
2. user can use this function to search for any crypto from his list with name, symbol or contract
3. if the user clicks on the star it unselects the asset this removes the asset from the waiting list

Crypto Analysis Page

This page represents the analysis of each crypto, when you click on a crypto the platform analyzes and outputs the data of the crypto on this page

O 17078.7 O 17078.7 L 17078.7 C 17078.7 - 250.6 (-1.47%)

1-

1. Popularity rating - The popularity rating is calculated based on the number of activities on Twitter, Reddit and YouTube if many people talk about it.
2. Potential success - the popularity success rating is calculated using the number of holders + the first 10 holders if they do not hold a large portion of the tokens + the number of wallets connected if there are not many wallets connected together the rating increases + if liquidity is blocked + tokenization + audit
3. Market cap - the total market cap of crypto
4. contract score - This score is calculated if the contract has been successfully deployed
5. Magic score - the magic score is the edition of 1+2+4 and we divide by 3. (less than 60 to 50 is a risky token. from 50 to 0 is a risky token from 60 to 70 is a good token from 70 to 100 is a safe token)

2- In this section we have a Japanese candle chart and we have a simulation of the future movement of the token (this simulation is based on technical analysis and safe score information)

1. This drop-down option allows you to choose over how many hours we want to display the graph
2. the name of the asset
3. invest now - When we click on this button, it takes us to a DEX to swap or buy the asset
4. When you click on this button, it adds the asset to the wishlist
5. the price of the asset
6. how much the asset increased or decreased during the day
7. the asset blockchain
8. the address of the asset
9. circulation supply - how many tokens are circulating
10. total supply - how many tokens were created for the asset
11. Long/short - the ratio of buyer or seller on the asset
12. performance - asset performance over 1 year, 1 month, 1 week and 1 day
13. This diagram allows to measure the future movement on the asset thanks to technical analysis

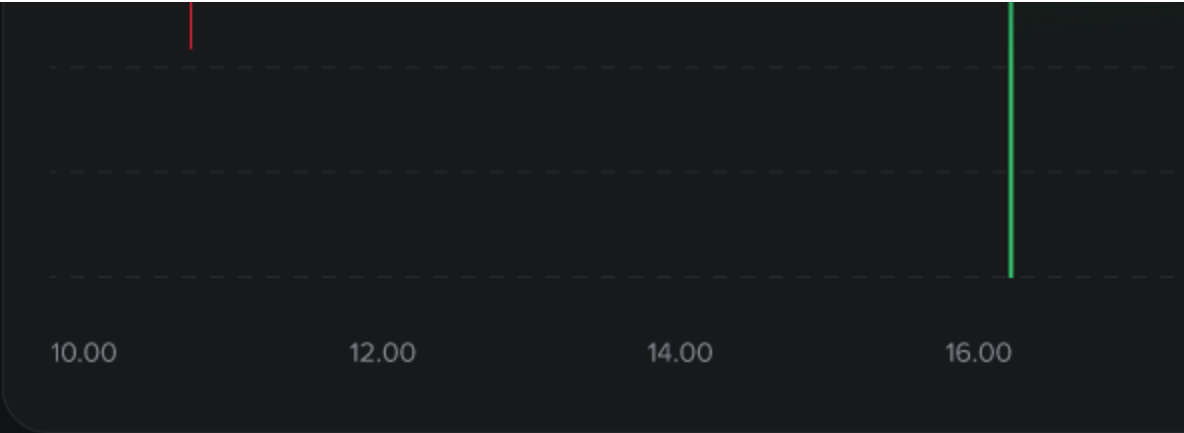

Move down - if the platform analyzes a potential drop over the next 24 hours the bottom chart will remain red and the background of the move down will be redder.

Move up - if the platform analyzes a potential rise over the next 24 hours the bottom chart will slide to green and the background of the move up will be darker

Consolidation - if the platform analyzes a consolidation over the next 24 hours the bottom chart will slide to the middle (yellow)

1. social networks, websites... of the asset
2. Dump - This rating is calculated using the wallet (if a person does not hold the most tokens + people do not have several wallets connected together on the asset + if the liquidity is blocked)
Pump- This rating is calculated using the wallet (if a person does not hold the most tokens + people do not have several wallets connected together on the asset + if the liquidity is blocked)
3. This section presents Twitter, it displays what users say about the asset on Twitter in real time.
4. Grayscale holdings - chart represents number of vs price
5. Alert - This box is only active for signals sent by the platform (if a user has an address to analyze a crypto if it is not in the signals the platform does not display this box).

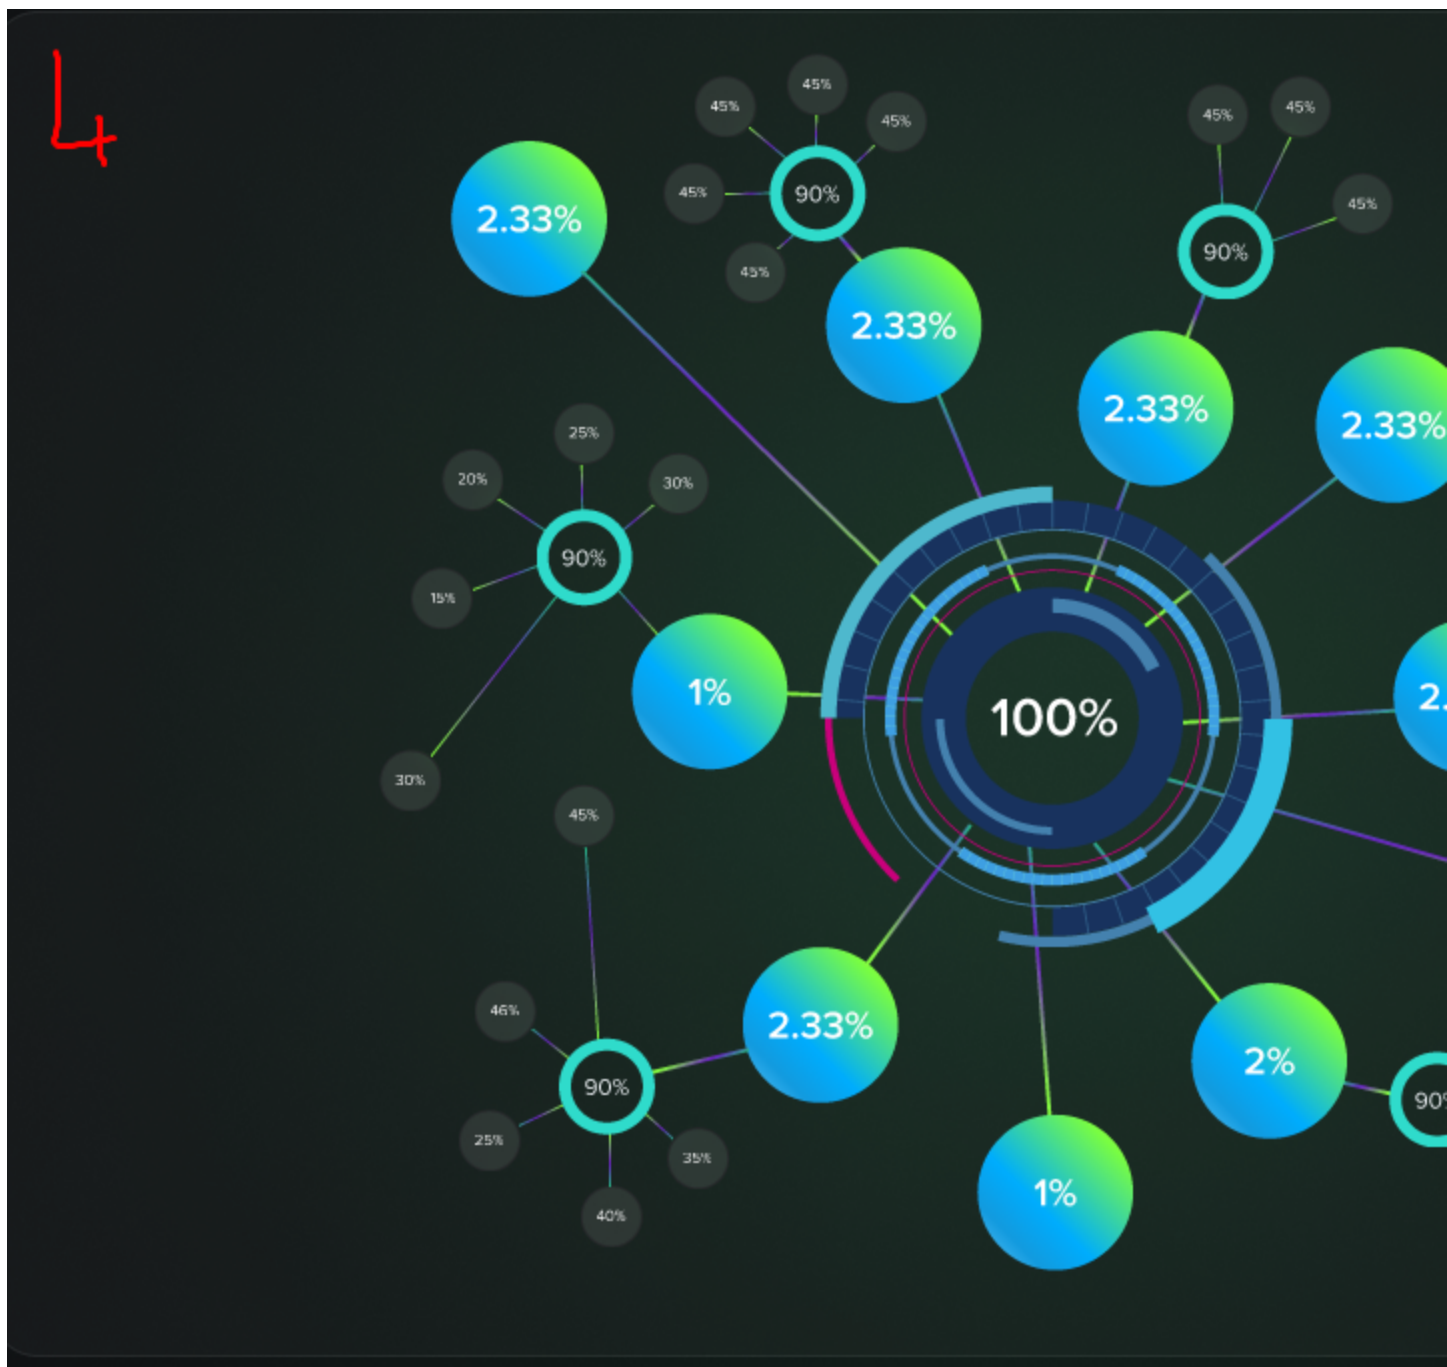

- 1- The name of the asset
- 2- The price of the asset
- 3- When the signal was sent
- 4- how much performance has it increased or decreased?
- 5- at what price the signal was sent
- 6- What price does the platform advise to close?
- 7- The lowest price of the asset during the day
- 8- the level of progress to reach the closing price recommended by the platform

- 9- Advisor alert is buy
- 10- the multiple advisor by the platform according to its technical analysis
- 6. Total value locked - The total value locked of the asset on-chain
- 7. Volume - the 24-hour trading volume of the asset

4- Wallet connect scan

This section has the function of scanning and representing the wallets of an asset in the form of drawings (if a wallet has several sub-wallets it will draw it with the sub-wallets) if a wallet does not have a sub-wallet, it will draw it but without a sub-wallet. The 100% in the middle represents the number of tokens in circulation (the drawing only represents the top 10 holders of the crypto).

5- Top 10 wallet
